

INSURETECH

OVERVIEW

Our InsureTech team combines the regulatory and transactional experience of our insurance industry lawyers with the specialized experience of our technology practice to provide the most current legal knowledge base in InsureTech innovations in the industry. Our team advises clients on the contractual, regulatory and practical implications arising out of the often collision of speed to market for InsureTech innovation and the frequent disruption of decades long industry practices and evolving regulation meant for traditional oversight for consumer protection.

Our collaboration provides the experience to solve regulatory and system challenges inherent in InsureTech solutions coming from insurer, agency, technology and other industry participants. We advise on and seek solutions for our InsureTech clients facing a variety of challenges, including among others:

- Ventures involving alternate insurance product distribution channels;
- The use of automation and “big data” in underwriting;
- Investment in InsureTech solutions;
- Compliance with U.S. state and federal rules, U.K. FCA and PRA rules and their interpretation;
- The use of A.I. in insurance products and distribution;
- Regulatory notices, authorizations and approvals;
- Technology licensing, procurement, and outsourcing transactions and agreements;
- IT outsourcing services, including applications development, maintenance and support, help desk, end user compute, IT security, data center, and other technology;
- Advising on automation and cloud arrangements; and
- Joint ventures and service agreements to enable technology solutions among partners.
