

## ENVIRONMENT

### OVERVIEW

BCLP has particular depth in the environmental field and we offer a leading environmental practice committed to balancing social, environmental and economic concerns. For more than 30 years, our lawyers have represented clients facing a broad range of environmental issues and challenges, including environmental compliance counseling, litigation, liability management, strategic planning and stewardship. The technical skills of our environmental lawyers combine with a multidisciplinary approach to offer clients an exceptional, comprehensive service. Our practice methods are deliberately solution-orientated and geared towards treating environmental law practice as a means to client's ends rather than as an end in itself.

The lawyers who practice environmental law at BCLP have the experience and reach to assist clients in the wide variety of matters they face in the field, in the courtroom and at the negotiating table. The hallmarks of our practice are deep technical knowledge in environmental and occupational health and safety law, a record of success in the litigation and trial of significant environmental and related insurance-coverage lawsuits (including group/class actions and mass torts), and advising on major projects of international, national and regional importance that raise complex environmental issues. We help our clients to navigate through the intricacies of environmental law and policy, including nature conservation, environmental impact assessment, environmental regulatory issues, dispute resolution and the environmental aspects of real estate and corporate transactions. Delivering solutions to environmental problems that confront owners of contaminated land, and developers of regeneration projects on brownfield land, also remains a core part of our business.

Our lawyers are well aware that it is often essential for corporate and other institutional clients to maintain a working relationship and reputation for integrity, cooperation and environmental excellence with regulators and other public stakeholders. Our lawyers have many years of experience working with agencies and other stakeholders to represent clients effectively and with appropriate sensitivity to their reputational interests.

Lawyers in the Environmental Practice Group represent the firm's clients over the full spectrum of environmental and occupational safety and health matters. Please visit our associated environment pages to view more specific areas of our experience.

### **PFAS in food packaging: state-by-state regulations**

In the absence of comprehensive federal regulation of PFAS in food packaging, states are dishing out their own laws. Thus far, twelve states have enacted laws addressing PFAS substances in food containers and packaging materials (“Food Packaging”), and there are fourteen proposed bills that are currently pending in numerous states. These laws are intended to address concerns that storing food in Food Packaging that contains PFAS compounds may result in increased ingestion of those PFAS substances. Related to food packaging, a growing number of states are enacting or proposing general bills involving recyclability of food or beverage packaging, but this client alert does not specifically address those requirements as these measures do not exclusively involve PFAS substances. According to the United States Environmental Protection Agency (“EPA”), commonly cited examples of Food Packaging that hav...

## **PFAS drinking water standards: state-by-state regulations**

In the absence of an enforceable federal drinking water standard for per- and polyfluoroalkyl substances (“PFAS”) – for the time being anyway - many states have regulated PFAS compounds in drinking water. The result is a patchwork of regulations and standards of varying levels, which presents significant operational and compliance challenges to impacted industries. This client alert surveys the maximum contaminant levels (“MCLs”), as well as guidance and notification levels, for PFAS compounds – typically perfluorooctane sulfonate (“PFOS”) and perfluorooctanoic acid (“PFOA”) – in drinking water across the United States.

## **How UAE is legislating to decarbonise buildings**

The built environment is crucial to the United Arab Emirates' (UAE's) extraordinary and rapid ascent: since its foundation in 1971, the country has constructed the world's tallest building and largest shopping mall. That scale of development has undoubtedly made the UAE the success it is today – but has come at a cost. The World Economic Forum estimates that 40% of global carbon emissions come from buildings and infrastructure, and the lion's share of these come from ongoing building operation. The energy consumption of buildings in the UAE is among the highest in the world, with modern living in the Arabian Peninsula necessitating 24-hour air conditioning in malls, homes and offices.
